Calcium-25® helps farmers & growers when used in fall

Calcium-25® increases profits on alfalfa, hay, pasture, and wheat!

Calcium-25®

Calcium Mineral Supplements

Organic - Conventional

For Alfalfa, Hay, and Pasture....
You increase your yields by applying Calcium-25 after each cutting, or spraying in summer and fall on pasture & grasses. Alfalfa also shows a higher ratio of foliage to stem growth!!

Higher Quality!!

Spray after every cutting

for continued increases!!

Our customers over the past 28 years all confirm that using Calcium-25 in the fall sets crops up to produce much more in the spring! Spraying again in spring further improves crop yields on these crops.

Dr. Andrew J. Welebir, who developed Calcium-25 almost 3 decades ago, explains that "Calcium-25 only works when diluted with the proper amount of water. In solution, it forms a 'complex' with Ca²⁺ ions and certain plant waxes. This is quickly absorbed by the plant, causing a rapid stimulation of plant growth. This complex is why so little is needed. Calcium-25

ALL plants experience a nutritional calcium deficiency at one point. It could be uptake from the soil, tissue deficiency, or translocation problems!

Core increases are up to 33% using Calcium-25 - all for about the price of a barrel! (some say even higher yields)...

...and Bio-Diesel? Lower production costs!!!

See our website for more on all of these!!

"What could I have made this year using Calcium-25?" Good question! With CORN at \$3.50/bu, using Calcium-25 would be the same as getting \$4.67/bu with your acreage. SOYBEANS at \$11 - could be \$16.50/bu. WHEAT - \$5/bu - could be \$7.20/bu!! (These are the equivalent values of your acreage with a normal yield, compared to increases you get using Calcium-25). Use Calcium-25 before other products and they'll both work better!! for as low as \$4 to about \$6 per acre depending on your crop!!

There is less and less talk about alternative fuels, such as ethanol and bio-diesel lately. And it's more apparent that the voters are not having a say in the government they voted for. Rather, we are run by big oil, drug & insurance companies, and banks. Oil companies have known for years (and covered up) that fossil fuel emissions CAUSE CANCER! Where are the "flex fuel" vehicles?

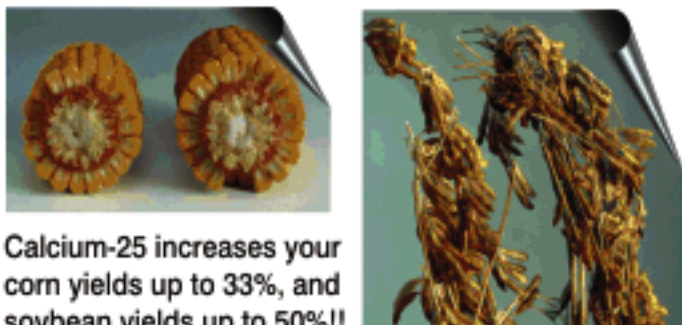

should never be compared to other products, some of which need hundreds of pounds per acre to have a chance of being absorbed." Temperature is also important, since it determines absorption rate through the leaves. Calcium-25 increases the plant's ability to use nutrients from the soil, sunlight, and water more efficiently. And it works equally well with calcium-rich and calcium-deficient soils. No extra nutrients in the soil are needed to get increases in yield and profits with Calcium-25 - affordably!!

not treated

treated with Calcium-25

Soybeans were found resistant to frost damage when treated with **Calcium-25**
(Minnesota trial by Dan Juneau, 1-866-546-9297)

Calcium-25 increases your corn yields up to 33%, and soybean yields up to 50%!!

Corn shows a consistent increase in yields by producing an extra 2-4 (or more) rows of kernels. Soybeans have more pods with more beans per pod (more pods form at the top!) Plants on right - Calcium-25

Calcium-25 for **Apples and Fruit Trees** increases yields when it is applied early to mid-season, and is **99.55% effective against bitter pit** (according to the University of California). Application up to 2 weeks before harvest improves storage. Furthermore, using Calcium-25, unlike any other calcium product, **increases small tree size** for a better yield the following year!! Our product for use on **summer and winter vegetables** increases yields up to **100% and more**, and is also used for **cotton, grapes, peanuts, all berries, and nursery crops!**

*NOT just a calcium product!
Does NOT replace lime or other products - makes them work better.
IMPROVES yields, regardless of calcium levels - stimulates growth!*

1-800-673-8502
afternoons & evenings, 7 days (If lines are busy, leave a message!!)

Yield increases up to:

Corn	15-33 %
Soybeans	50%
Wheat & Alfalfa	44%
Small Grains, Milo	20-40%
Vegetables	30-100%
Apples & Fruit Trees	18-28%
Cotton	18.4%
Peanuts	15.5%
Rice	20%
Pasture & Other Crops	20-50%

With 20-50% increases, you can double your net profits!!

Just give us a call!!!
