

*Let Calcium-25
improve your quality
and profits with
blueberries - ALL
BERRIES!!*

Calcium-25 has been used successfully on all berry plants, especially blueberries, over many years of our upcoming 24th year in business improving growers' crop yields and quality!!

Blueberries should be sprayed early in the season when new growth appears for the longest lasting results, but can also be treated anytime during the season, and as often as every two to four weeks. This includes up to two weeks before a final harvest, and also in fall to make stronger plants over the dormant period for as a "jump start" for spring!!

Calcium-25 for vegetables is the most recommended product, and is affordable at prices as low as less than \$5 per acre!!

So, why wait? Start improving you yields, quality, and profits with our sale prices!!

*Improve the yield and
quality of your grapes
this year with*

Calcium-25[®]

Calcium Mineral Supplement

We all know that grapes need calcium. Most of us don't know that there is an efficient, cheap way to do this -- and it's 100% Organic and cost effective!!!

Calcium-25 was developed as a natural calcium source, formulated with ingredients already present on the surface of plant leaves.

When applied as directed as a foliar spray, the natural ingredients in the Calcium-25 solution causes the plant leaf surface to actually recognize the solution as part of the natural components of the leaf surface. As a result, calcium is absorbed into the leaf and translocated throughout the plant.

*The result?? The plant grows quickly, through natural means, to bring the added calcium concentration inside the cellular structure to its normal level. A larger plant at an early stage of development means a healthier and stronger plant, capable of bearing more grapes -- and higher quality grapes -- **MORE PROFIT!!!***

Always remember that the best time for a first application of Calcium-25 on grapes is before buds are developed. Another application to increase vine size and the quality of grapes is when plants are about 18" in height or so, and to increase storage of table grapes, apply up to two weeks before harvest!!
